

# RAIN CATCHER

Rainwater Storage Unit

CONSERVE WATER

SAVE MONEY

HELP THE ENVIRONMENT

## **HELP THE ENVIRONMENT - CONSERVE WATER**

The RainCatcher can dramatically reduce your household need for treated tap water. It diverts rainwater from your eavestrough for use anywhere around your house or yard. *This can help reduce your household water bill.*

## **COLLECT UNTREATED WATER FOR YOUR PLANTS**

The RainCatcher will collect and hold up to 200 litres of untreated, "soft" water. *This water is free of calcium, lime and chlorine, making it ideal for vegetables and plants.*

## **REDUCE LOAD ON SEWER SYSTEMS & WATER TREATMENT PLANTS**

The RainCatcher reduces the demands on municipal water delivery and sewage treatment plants. It can help eliminate the need for costly water management infrastructure upgrades in your municipality. *This can result in the potential saving of millions of tax dollars. For example, the RainCatcher will divert 30% of the rain from the average roof in an average rainfall. During a heavy 6 hour storm it will divert 15% of the rainfall from the sewer systems.*

- **200 litre Capacity**
- **Overflow Connection**
- **Insect/Debris Screen**

*for a greener tomorrow*
